CMSLIM

Non-Invasive Contouring Treatment.

Contouring Master

CMSLIM is the most advanced and intensive electric muscle stimulator. A focused electromagnetic field passes through all skin and fat to effectively stimulate the muscle, providing the most intensive continuous contractions which are ideal for muscle growth, and also inducing apoptosis. It's cutting-edge technology non-invasive body contouring, as it not only BURNS FAT but also BUILDS MUSCLE.

Burn Fat - Build Muscle +

CMSLIM is a HI-EMT device designed for aesthetic purposes, having 2(two) applicators with higher intensity. Two applicators are placed on the target muscle area, such as your abs, thighs, or buttocks. The applicators then generate intense electromagnetic that causes involuntary muscle contractions.

HI-EMT

High-Intensity Electromagnetic Muscle Trainer

As working out, the stimulation causes to rebuild and repair muscle tissue, resulting in stronger, firmer muscles. The patients feel the same soreness after CMSLIM as you would after a high-intensity workout. Recent studies reported that on average 15% - 16% increase in abdominal muscle thickness was observed in treated patients one to two months after HI-EMT treatments.

Effect on Muscles

HI-EMT is the medical technology that is used in aesthetic medicine, urology, and gynecology. It uses a focused electromagnetic field with a safe intensity level. Electromagnetic field passes non-invasively through the body and interacts with motor neurons which subsequently trigger supramaximal muscle contractions.

Effect on Fat

Just as gaining muscle helps to reduce body fat, Intensive continuous contraction of muscles can affect the fat layer. This contraction is effective in burning fat and can result in a toned body.
